**HAYMAN REESE DUAL CAM SWAY CONTROL (26002)** 000832
The Hayman Reese Dual Cam High-Performance Sway Controller is the premier method of controlling sway, and the only product of its kind in the Australian market. Unlike other sway controllers, it works to control sway from the start rather than once it has begun. When towing in a straight line, the spring bars on either side of the trailer’s A-frame are locked in position. This essentially creates a ‘rigid’ connection between tow vehicle and trailer and minimises the effects of induced sway caused by high crosswinds or passing vehicles. Usually the spring bars ride in a locked-in position, even on sharp curves. However, when cornering manoeuvres are required, the cams automatically slide out of their fixed position to permit full radius turns. When the manoeuvre is short and abrupt, the spring bars seek a straight-line towing angle that helps the tow vehicle retain control. The Dual Cam works to hold down the start of swaying activity while at the same time allowing free and easy vehicle and trailer interaction. It’s installed on the trailer and therefore, doesn’t require adjustment. The Dual Cam HP is fitted in conjunction with any Heavy Duty Hayman Reese Weight Distribution System that includes high performance spring bars with cams. It is ideal for any trailer with a ball weight in excess of 200kg.

PRO SERIES FRICTION SWAY CONTROL (PRO4000)
043016
Friction Sway Control uses friction to resist pivotal movement and thereby works against the effects of induced sway. It operates on the principle of “stiffening” the coupling between the tow vehicle and trailer. The degree of “stiffening” or friction is adjusted to suit various trailer weights and towing conditions. Its operation is simple and uncomplicated. It doesn’t prevent the generation of sway, it simply works to resist the forces once they have started.

FEATURES:
- Installs and removes easily
- Removable with two spring locking pins
- Heavy construction for added reliability
- Friction brake keeps trailer and tow vehicle stable
- Quick attachment to trailer frame and ball mount
- Can only be used on one side

Hayman Reese Weight Distribution systems are not specifically designed for use with the Cruisemaster off-road couplings, as the extra articulation that the off-road coupling provides can sometimes allow contact between the HR WDH system and coupling which may possibly result in damage to either component. Cruisemaster has designed a range of adaptors to suit the various HR WDH systems available. These adaptors reposition the towing point which allows a DO35 to articulate without any chance of contact. Hayman Reese is the only brand of WDH that these adaptors have been tested and approved for use with.
